LMU Open Science Center: **Embedding Open Research Practices** at LMU Munich and beyond

LMU LUDWIG-MAXIMILIANS-UNIVERSITÄT MÜNCHEN

OSC LMU Open Science Center

The researcher-led LMU Open Science Center (OSC) advances research excellence at LMU Munich by promoting open, responsible, and reproducible practices since 2017.

Consultations

Support for grant applications (e.g. Cluster of Excellence) and implementation

Community building

Discipline-specific meetups and initiatives, and interdisciplinary networking

Meta-research

Interdisciplinary hub for meta-researchers forming consortia (e.g. META-REP, SHARE-CDT)

Liaison with stakeholders

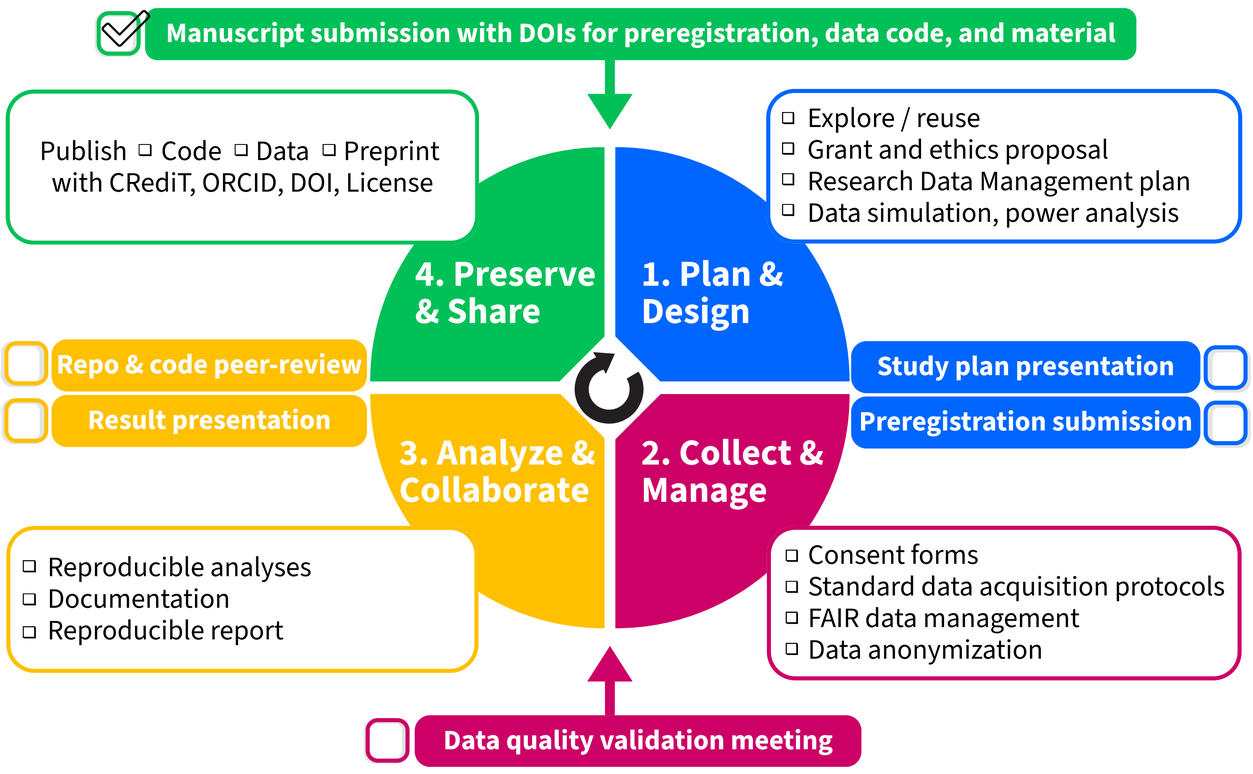
Member of e.g. German Reproducibility Network, Coalition for Advancing Research Assessement

Training

Switch-to-Open

A 6-month structured training and consultation program for research groups

Write a tailored handbook for the group with best research practices around the life cycle of a project, to be used for quality assurance & onboarding members, and to be adapted by other groups with similar methods and data types.

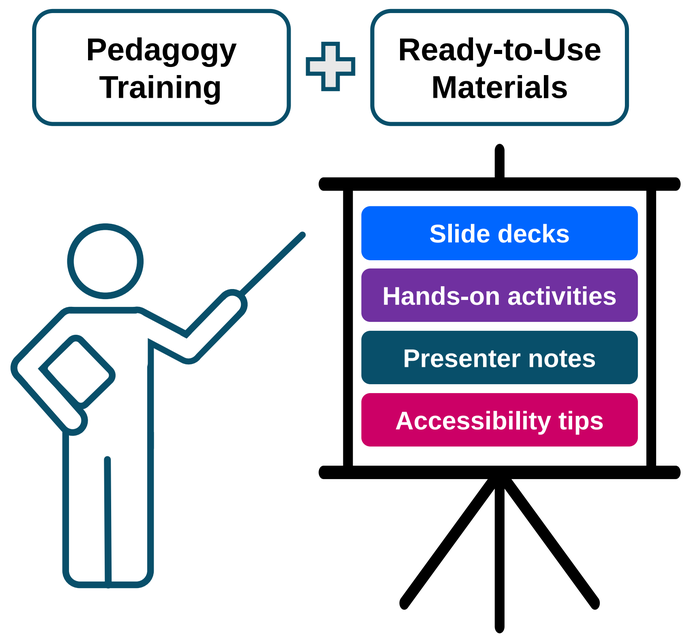


The participation in the Switch to Open Program was highly valuable for our research group. Developing a tailored research practices handbook helped streamline workflows, strengthen reproducibility, and clarify expectations across the team.
— Prof. Dr. med. Inga Katharina Koerte, M.D.

Train-the-Trainer

A 16-hour training in open science pedagogy and leadership

- Empower educators to teach, mentor, and advocate for open research practices
- Provide them with ready-to-use teaching material with presenter notes, accessibility tips, and hands-on activities
- Support them logistically and conceptually to organise their own workshops



I really enjoyed the instructor training. It was a great professional development opportunity that strengthened both my understanding of Open Science and teaching skills, giving me the confidence and tools to design and deliver my own workshops!
— Alberto G. Villagran, PhD Candidate

Self-learning Catalog

For researchers and students who want to learn a specific open research practice at their own pace

- 16 Self-paced tutorials
- 04 Lecture recordings
- All CC-BY-SA licensed materials to allow reuse and modification

The self-paced tutorials are super for us as beginners to advance our learning from such organized information. I personally feel that I never want to miss a single lecture from the OSC.
— workshop participant

Workshops & Summer School

From 2-h workshops to learn a specific practice to 5-day summer schools to acquire the essential open science package

- 10+ workshops & 1 summer school per year
- Attendees from 16 out of 18 LMU Faculties
- Inclusive and supportive environment: interdisciplinary audience, team of facilitators, hybrid format, open for worldwide participation

The summer school really did an excellent job of facilitating an interactive hybrid format. Even though I only could participate online, I felt fully included. The topics were well balanced, the tutorials were well organized, the lectures were interesting and broad, the tutors demonstrated know-how from a hands-on-perspective... Overall, !
— Summer School Participant

3000+ RESEARCHERS TRAINED

150+ MEMBERS

460+ ARTICLES ON OPEN SCIENCE

5 SUMMER SCHOOLS
